Intrasense announces the referencing of its Myrian[®] platform with Vidi, first cooperative network of medical imaging groups in France

Intrasense (FR0011179886 - ALINS), a specialist in medical imaging software solutions and Myrian[®] designer and Vidi, the leading cooperative network of medical imaging groups in France, signed an agreement on January 30th, 2021 to reference Myrian[®] solutions.

Strength of Vidi network

Vidi network is a pioneer in French liberal radiology. Through its independence, Vidi defends a medical project for the benefit of the quality of care for all patients. Thanks to its national network, Vidi facilitates access to excellence of diagnostics and care, as well as specialist radiologists in all areas of expertise, spread across France.

The Vidi cooperative network brings together 52 medical imaging centers and nearly 900 radiologists. All are mobilized to perform the most relevant and efficient medical imaging examinations throughout the care pathway, from screening to interventional, from diagnosis to treatment.

As a facilitator of its members' projects, Vidi offers a catalog of services allowing them to focus on excellence in care. Vidi was willing to reference an advanced multimodality, multisite, neutral, and French post-processing solution. And it is within this context, that Intrasense's solution was referenced early this year.

The quality of Myrian[®] technology

The referencing of Myrian[®] as a solution of Vidi's network demonstrates the strength of the platform's assets and its ability to meet the important needs of a large national radiology group. Indeed, the Myrian[®] platform provides all the cutting-edge clinical tools and a structured workflow that allows radiologists and clinicians to focus on the quality of patient care.

Thus, Intrasense's solution enables Vidi's teams, spread over different territories, to work more efficiently while benefiting from the same tools in a unified environment. The platform also allows them to share patient information with ease and agility.

Furthermore, the Myrian® platform as a support for all modalities (MRI, Scanner, etc.) regardless of the manufacturer, is a major benefit for a group using heterogeneous fleet of equipment. This benefit was also determining in the decision to have Myrian® referenced by the Vidi network.

Lastly, this partnership is consistent with Intrasense and Vidi's values, who share a genuine commitment, one of quality care for all patients.

About Intrasense

Founded in 2004, Intrasense develops and markets a unique medical device named Myrian®, a software platform facilitating and ensuring diagnosis, decision-making and therapeutic follow-up. Thanks to Myrian®, more than 1000 hospitals and clinics spread over 40 countries use a unique and integrated platform supporting all types of imaging modalities (MRI, scanner...). Enriched with expert clinical modules dedicated to specific pathologies and organs, Myrian® provides a universal medical image processing solution which can be fully integrated into any healthcare information system. Intrasense has more than 40 employees among which 15 are dedicated to Research & Development. Intrasense has been labelled 'innovative company' by the BPI and has invested more than 10 million euros in Research & Development since its creation. More information on: www.intrasense.fr
