

Press Release

Montpellier, France, February 1st, 2022 – 5:45 pm CET

Intrasense and Forcomed sign a five-year strategic partnership agreement

Intrasense (FR0011179886 - ALINS), a specialist in medical imaging software solutions and designer of Myrian[®], and Forcomed, a leading provider of continuing medical education, have entered into a five-year partnership to enable radiologists and radiology technicians to use Myrian[®] during a new training module on breast imaging.

High visibility of Myrian[®] among radiologists and technicians

This exclusive partnership aims to use Myrian[®] latest imaging solutions for women's health – Myrian[®] XP-Mammo and Myrian[®] XP-Breast – for the practical part of a new training programme to support organised breast cancer screening and quality control in digital mammography. This means that 1,200 radiologists and 3,150 radiology technicians in France, i.e. 15% of the profession, will use Myrian[®] advanced visualisation tools during their practical training in breast cancer screening.

After examining the best solutions on the market, Forcomed chose to invest in Intrasense clinical applications to enable learners analyse and interpret accurately mammography and MRI breast images.

Forcomed, a major player in medical training

A key player in radiology training in France for more than 25 years, Forcomed currently offers 70 programmes of continuing medical education. Its multidisciplinary training programmes have assisted over 80,000 healthcare professionals (radiologists and specialists, radiology technicians and administrative staff), improving their practices and strengthening their skills throughout their professional career.

Already an accredited medical training provider, Forcomed has been recognised as an official mammography training organisation by the French General Health Administration DGS (*Direction Générale de la Santé*) and the French National Cancer Institute INCa (*Institut National du Cancer*).

“We are very proud to partner with a major national player that contributes greatly to the improvement of healthcare professional standards by providing high-quality specialised training. Intrasense medical imaging technologies and solutions are among the most advanced at the service of radiologists and radiology technicians. The pooling of our knowledge is a real asset and it will help us strengthen our commitment to improve user experience and clinical value,” said **Nicolas Reymond, CEO of Intrasense.**

A complementary know-how alliance

Forcomed and Intrasense, two leading radiology players in France, chose to combine their expertise and values to create jointly a new training module. This partnership also highlights the strong recognition by the medical imaging industry of the know-how and clinical value of Intrasense women’s health imaging software solutions.

“We chose Intrasense because it is able to provide practical tools for training radiologists and radiology technicians on organised breast cancer screening under real practice. We are also well aware that a French company with an internationally competitive product will help us create and develop more training courses. We are very satisfied with the work undertaken with our new French Tech partner, and we look forward to expanding our educational programmes for radiologists, interns and their teams,” indicated **Dr Jean-Charles LECLERC, CEO of Forcomed.**

The first training sessions will be held from January 31st to February 2nd, 2022, thus launching a promising partnership for the next 5 years.

About Intrasense

Founded in 2004, Intrasense develops and markets a unique medical device named Myrian®, a software platform facilitating and ensuring diagnosis, decision-making and therapeutic follow-up. Thanks to Myrian®, more than 1000 hospitals and clinics spread over 40 countries use a unique and integrated platform supporting all types of imaging modalities (MRI, scanner...). Enriched with expert clinical modules dedicated to specific pathologies and organs, Myrian® provides a universal medical image processing solution which can be fully integrated into any healthcare information system. Intrasense has more than 40 employees among which 15 are dedicated to Research & Development. Intrasense has been labelled 'innovative company' by the BPI and has invested more than 10 million euros in Research & Development since its creation. More information on: www.intrasense.fr

About Forcomed

Forcomed was created in 1994 as a training organisation of the French National Federation of Radiologists FNMR (*Fédération Nationale des Médecins Radiologues*). Its mission is to provide continuing medical education and, since 2012, continuing professional development programmes dedicated to medical imaging. Accredited by the French General Health Administration DGS and INCa as an official mammography training organisation, Forcomed has since expanded its training themes and has gradually become the reference tool to improve the practices of healthcare professionals. Certified by QUALIOPI and accredited to provide Continuous Professional Development (CPD) programmes, Forcomed designs training and evaluation tools best suited to medical imaging, including to promote knowledge update, decision-making and the use of cutting-edge imaging techniques.
