

Press Release

Montpellier, France, April 5, 2022 – 5:45 pm CEST

TeleDiag chooses Intrasense by signing a commercial contract for teleradiology

Intrasense (FR0011179886 - ALINS), specialist in medical imaging software solutions and designer of Myrian®, and TeleDiag, a leading player in teleradiology in France entered into a partnership for the deployment of the Myrian® platform to strengthen clinical efficiency and the management of cancer patients.

Myrian® serving a pioneering teleradiology network

Created in 2008, TeleDiag is an independent network that has become the leading teleradiology player in France. The network is made up of numerous private and hospital-based radiologists, with more than 500 radiologists serving more than 200 partner healthcare institutions throughout France.

By choosing Intrasense imaging solutions for its oncology monitoring needs, TeleDiag recognizes the efficiency and relevance of the XP-Onco application from the Myrian® suite. This contract gives TeleDiag's participating radiologists access to the Myrian® standard advanced visualization tools, in order to accurately follow the evolution of lesions and oncological pathologies.

Teleradiology for an improved response to healthcare issues in France

Widely democratized since the beginning of the Covid-19 pandemic, telemedicine is experiencing considerable growth and has become a real solution to meet the growing medical needs in France and the availability of medical resources. Teleradiology, as well as teleexpertise, is one of the most practiced telemedicine acts in France.

TeleDiag, the first cooperative teleradiology network, offers a collaborative experience to radiologists to pool their expertise, address practitioner shortages and guarantee access to imaging throughout France.

Since its creation in 2008, TeleDiag has managed over 2 million patient cases throughout France and expects to manage more than 400,000 this year, a sign that teleradiology is taking root in the medical landscape, to the satisfaction of both patients and healthcare professionals. In addition, the network also provides its tools to Territorial Hospital Groups (*Groupements Hospitaliers de Territoire* or GHT) that wish to facilitate their own collaborations.

In addition to their clinical performance, Myrian® solutions offer the added advantage of being adaptable to all information systems, regardless of the equipment of healthcare institutions, which is a major asset for teleradiology and therefore the TeleDiag network.

Sharing common values to improve the care of cancer patients

Through this partnership, TeleDiag and Intrasense have chosen to combine their expertise with the common goal of ensuring access to quality healthcare and improving the efficiency of care for cancer patients.

Over the years, Myrian® XP-Onco has become a reference tool that saves radiologists valuable time and allows them to focus on image interpretation and generating diagnostic results. Oncology is an important part of the Intrasense technological and clinical heritage.

Through the development of the future line of products dedicated to oncology, Myra, Intrasense continues to strengthen this unique expertise and confirms its strong commitment to the fight against cancer through imaging and innovation.

About Intrasense

Founded in 2004, Intrasense develops and markets a unique medical device named Myrian®, a software platform facilitating and ensuring diagnosis, decision-making and therapeutic follow-up. Thanks to Myrian®, more than 1000 hospitals and clinics spread over 40 countries use a unique and integrated platform supporting all types of imaging modalities (MRI, scanner...). Enriched with expert clinical modules dedicated to specific pathologies and organs, Myrian® provides a universal medical image processing solution which can be fully integrated into any healthcare information system. Intrasense has 56 employees among which 16 are dedicated to Research & Development. Intrasense has been labelled 'innovative company' by the BPI and has invested more than 10 million euros in Research & Development since its creation. More information on: www.intrasense.fr

About TeleDiag

The independent TeleDiag network brings together a large number of specialized radiologists who make their expertise available to imaging centers through a teleradiology system. The objective of the TeleDiag network is to respond to the shortage of radiologists and to reduce the time required to treat patients with a qualitative approach. Since its creation in 2008 by a team of radiologists working in hospitals or in private practice, TeleDiag has become the leading French-speaking network in teleradiology. This network brings together more than 500 radiologists, bound by an individual commitment, and supports more than 200 health establishments, 24 hours a day. More information on: www.telediag.com.
