

PRESS RELEASE

AREVA TA wins a contract to design a low and medium level waste disposal center in Lithuania

Paris, October 29th, 2009

Following an international tendering process, the team of companies headed up by AREVA TA was awarded a contract to design a near surface repository for low and medium level waste on the Ignalina nuclear power plant site in Lithuania.

The project, funded primarily by the EBRD, includes the design studies for the repository and on-site support during construction. The repository will receive low and medium level operational waste recovered from the dismantling of the Lithuanian power plant.

As part of AREVA's Reactors and Services division, AREVA TA has extensive experience in the design of such facilities for radioactive waste, or in providing support to projects for their design and construction.

Other team members include the French national radioactive waste management agency ANDRA, which will provide its expertise in this field, the Lithuanian Energy Institute (LEI), which brings experience in safety and environmental assessment, and knowledge on national regulations, the company Specialus Montazas-NTP (SM-NTP), which contributes skills in geology, civil engineering, seismic design and mechanical design, and the company Pramprojektas (PP), which brings infrastructure know-how.

"It is important for us to participate in a project of this kind alongside ANDRA and our Lithuanian partners", announces Yves Lapiere, Chief Executive Officer of AREVA TA. "Bringing all of these skills to bear on this type of facility confirms the relevance of the industrial solutions we have been offering our customers for more than thirty-five years, solutions which go hand-in-hand with the safety and environmental protection requirements."

MORE ABOUT

All over the world, AREVA provides its customers with solutions for carbon-free power generation and electricity transmission. With its knowledge and expertise in these fields, the group has a leading role to play in meeting the world's energy needs.

Ranked first in the global nuclear power industry, AREVA's unique integrated offering covers every stage of the fuel cycle, reactor design and construction, and related services.

In addition, the group is developing a portfolio of operations in renewable energies. AREVA is also a world leader in electricity transmission and distribution and offers its customers a complete range of solutions for greater grid stability and energy efficiency.

Sustainable development is a core component of the group's industrial strategy. Its 75,000 employees work every day to make AREVA a responsible industrial player that is helping to supply ever cleaner, safer and more economical energy to the greatest number of people.
