EDF Energies Nouvelles commissions a 106 MW wind farm in the United States

EDF Energies Nouvelles, a major player in the North American renewable energies industry, announces the commissioning of the Hoosier wind farm in Indiana. This 106 MW facility is equipped with REpower turbines, each with a unit capacity of 2 MW.

Developed and built by enXco, the US subsidiary of EDF Energies Nouvelles, the Hoosier wind farm is 100%-owned by the Group. A power purchase agreement (PPA) has been signed with US utility Indianapolis Power & Light, with the latter agreeing to buy the wind farm's entire output over a 20-year period.

This new achievement underpins EDF Energies Nouvelles' activities in the United States and lifts the Group's wind energy capacity installed in the country to 965.4 MW gross (695.5 MW net).

About EDF Energies Nouvelles

With operations in Europe and North America, EDF Energies Nouvelles is a market leader in green electricity production. With a development focused on wind energy for several years and more recently on solar photovoltaic, the Group is also present in other segments of the renewable energies market: small hydro, marine energy, biomass, biofuel and biogas. In addition, the Group is expanding in the distributed renewable energies sector.

EDF Energies Nouvelles, 50 %-owned by the EDF Group, is listed in Euronext Paris since November 2006 (code "EEN", ISIN code: FR0010400143).
