Contracts worth approximately €135 million¹

Alstom to service gas turbines in the Ivory Coast and Jordan

Alstom has been awarded two contracts for Long Term Service Agreements (LTSA) for GT13E2 gas turbines in the Ivory Coast and Jordan. The contract for the Azito power plant in the Ivory Coast covers a 15 year period and includes the delivery of spare parts, reconditioning services and inspection supervision for the gas turbines and generators. The contract for the Samra III power plant in Jordan spans a 10 year period and includes the delivery of new and reconditioned parts as well as supervision manpower for the execution of major inspections on all three GT13E2 units installed at the plant.

The Azito power plant, owned by Azito Energie S.A., consists of two GT13E2 gas turbines operating in single cycle mode and is located close to the country's capital Abidjan. The plant provides 288 MW of electric power to the grid and accounts for approximately 35 % of the total electricity production in the Ivory Coast.

For the Samra III power plant, owned by Samra Electric Power Co., Alstom has already provided two GT13E2 gas turbines and will commission the third turbine, generator and auxiliaries by summer 2013. In addition Alstom is currently supplying a steam tail to convert the existing Samra III 285 MW single cycle to a combined cycle power plant. This conversion will increase the plant's power generation capacity by an additional 143 MW and is scheduled to enter commercial operation in 2015.

Hans-Peter Meer, Senior Vice President of Alstom Thermal Services stated, *"These new service contracts confirm Alstom's strong position in servicing and maintaining gas turbines and generators. Both the Azito and Samra power plants are located in regions with extreme climate conditions where reliable power generation is key. Alstom's technology, solutions and services support our customers' needs in these regions and we are committed to further building strong relationships with the local power producers."*

About Alstom

Alstom is a global leader in the world of power generation, power transmission and rail infrastructure and sets the benchmark for innovative and environmentally friendly technologies. Alstom builds the fastest train and the highest capacity automated metro in the world, provides turnkey integrated power plant solutions and associated services for a wide variety of energy sources, including hydro, nuclear, gas, coal and wind, and it offers a wide range of solutions for

¹ They will be progressively booked throughout the execution of the contracts

power transmission, with a focus on smart grids. The Group employs 92,000 people in around 100 countries. It had sales of €20 billion and booked close to €22 billion in orders in 2011/12.
