AREVA signs services contract with the American utility PSEG Nuclear

Paris, September 4, 2013

AREVA has signed a long-term contract with the PSEG Nuclear for outage services for the three reactors at the Salem and Hope Creek nuclear generating stations in Salem County, New Jersey.

The scope of work covers refueling, inspections, and steam generator maintenance. The first operations will begin in fall 2013. As part of these activities, AREVA will provide services for two pressurized water reactors and a boiling water reactor.

PSEG Nuclear's facility is the second largest in the United States (more than 3,500 MWe). The three units generate enough power for approximately three million homes each day.

"We are proud to provide to PSEG and the U.S. nuclear industry competitive and quality solutions to improve the safety and reliability of nuclear plant operations over the long term," said Philippe Samama, AREVA Installed Base Business Unit executive vice president. "This contract is recognition of our culture of safety as well as advanced engineering and service capabilities."

MORE ABOUT AREVA

AREVA supplies advanced technology solutions for power generation with less carbon. Its expertise and unwavering insistence on safety, security, transparency and ethics are setting the standard, and its responsible development is anchored in a process of continuous improvement. Ranked first in the global nuclear power industry, AREVA's unique integrated offering to utilities covers every stage of the fuel cycle, nuclear reactor design and construction, and operating services. The group is actively developing its activities in renewable energies – wind, bioenergy, solar and energy storage – to become one of the leaders in this sector worldwide. With these two major offers, AREVA's 47,000 employees are helping to supply ever safer, cleaner and more economical energy to the greatest number of people.
