

## **Sensorion announces the positive *Data Safety Monitoring Board (DSMB)* review and continuation of the phase 2 clinical trial for **SENS-111 in acute unilateral vestibulopathy (AUV)****

*86 patients enrolled in SENS-111 clinical trial*

**Montpellier, 15 May 2019 – Sensorion (FR0012596468 – ALSEN)** a pioneering clinical-stage biopharmaceutical company which specializes in the development of novel therapies to restore, treat and prevent inner ear diseases such as hearing loss, tinnitus and vertigo, today announced that the independent Data Safety Monitoring Board (or DSMB) has undertaken a review of the safety data for the 76 first patients having completed the phase 2 clinical trial for SENS-111 in the treatment of acute unilateral vestibulopathy (AUV).

The DSMB has confirmed the absence of any concern as to the safety of SENS 111 and has recommended continuing the trial as scheduled and enrolling the remaining patients.

86 patients have been enrolled so far. The number of expected patients is some 100 in the centers open in the US, Europe, Israel and South Korea.

Sensorion is thus well ahead in achievement of this trial and we confirm that the trial results will be available in the second half of 2019 in order to assess the efficacy of the candidate drug.

### **About Seliforant**

Seliforant (formerly SENS-111) is the first representative candidate of the histamine type 4 receptor antagonist class to be tested for the symptomatic treatment of vertigo crises. Displaying a neuromodulation effect of the sensorineural inner ear cell function, Seliforant is a small molecule that can be taken orally or via a standard injection, and is currently in a separate Phase 2 clinical trial, being conducted in the United States, Europe, Israel and South Korea.

### **About Sensorion**

Sensorion is a pioneering clinical-stage biopharmaceutical company, which specializes in the development of novel therapies to restore, treat and prevent inner ear diseases such as hearing loss, vertigo and tinnitus. Our clinical-stage portfolio includes two phase 2 products: Seliforant (SENS-111) in acute unilateral vestibulopathy and Arazasetron (SENS-401) for sudden sensorineural hearing loss (SSNHL). We have built a unique R&D technology platform to expand our understanding of the pathophysiology and etiology of inner ear diseases enabling us to select the best targets and modalities for drug candidates. We also identify biomarkers to improve diagnosis and treatment of these underserved illnesses.

We are uniquely placed through our platforms and pipeline of potential therapeutics to make a lasting positive impact on hundreds of thousands of people with inner ear related disorders; a significant global unmet need in medicine today.
