

Onxeo to Attend Key Investor and Scientific Conferences

Paris (France), January 11, 2021 – 7:00 am CET - Onxeo S.A. (Euronext Paris, NASDAQ Copenhagen: ONXEO), ("Onxeo" or "the Company"), a clinical-stage biotechnology company specializing in the development of innovative drugs targeting tumor DNA Damage response (DDR), in particular against rare or resistant cancers, today announced that its management team will attend the following key investor and scientific conferences in the coming months:

- H.C. Wainwright BioConnect 2021 Conference
 January 11-14, 2021 (virtual conference)

 For more information and to register, click here
- Biomed Event
 January 26-27, 2021 (virtual conference)

 For more information and to register, click here
- 4TH Annual PARP & DDR Inhibitors Summit
 January 26-28, 2021 (virtual conference)
 For more information, <u>click here</u>
- Edison Open House Global Healthcare 2021
 January 26-28 2021 (virtual conference)
 For more information and to register, click here
- AACR Annual Meeting 2021
 April 9-14, 2021 (virtual conference)

 For more information and to register, click here
- * Given the evolving epidemic context, the reader is invited to refer to the organizers' websites for possible updates to the conditions of participation.

About Onxeo

Onxeo (Euronext Paris, NASDAQ Copenhagen: ONXEO) is a clinical-stage biotechnology company developing innovative oncology drugs targeting tumor DNA-binding functions through unique mechanisms of action in the soughtafter field of DNA Damage Response (DDR). The Company is focused on bringing early-stage first-in-class or disruptive compounds from translational research to clinical proof-of-concept, a value-creating inflection point appealing to potential partners.

platON™ is Onxeo's proprietary chemistry platform of oligonucleotides acting as decoy agonists, which generates new innovative compounds and broaden the Company's product pipeline.

AsiDNA™, the first compound from platON™, is a first-in-class, highly differentiated DNA Damage Response (DDR) inhibitor based on a decoy and agonist mechanism acting upstream of multiple DDR pathways. Translational research has highlighted the distinctive properties of AsiDNA™, notably its ability to abrogate tumor resistance to PARP inhibitors regardless of the genetic mutation status. AsiDNA™ has also shown a strong synergy with other tumor DNA-damaging agents such as chemotherapy and PARP inhibitors and the unique ability to abrogate resistance to targeted therapies such as PARPi. The ongoing DRIIV-1b extension study is evaluating the safety and efficacy of AsiDNA™ at a

dose of 600 mg in combination with the reference chemotherapy, carboplatin -/+ paclitaxel, in advanced metastatic tumors. Preliminary results from both cohorts showed good tolerability, stabilization of the disease and an increase in treatment duration compared to previous treatments. The ongoing REVOCAN phase 1b/2 study evaluates the effect of AsiDNA™ on the acquired resistance to PARP inhibitor niraparib in relapsed ovarian cancer.

OX401 is a new drug candidate from platON™, optimized to be a next-generation PARP inhibitor acting on both the DNA Damage Response and the activation of immune response, without inducing resistance. OX401 is undergoing preclinical proof-of-concept studies, alone and in combination with immunotherapies.
