Total Begins Producing Sustainable Aviation Fuel in France

Paris, April 8, 2021 – Total has begun producing sustainable aviation fuel (SAF) at its La Mède biorefinery in southern France and its Oudalle facility near Le Havre. The biojet fuel, made from used cooking oil, will be delivered to French airports starting in April 2021.

Total will also be able to produce SAF as from 2024 at its zero-crude Grandpuits platform, southeast of Paris.

All of these sustainable aviation fuels will be made from animal fat, used cooking oil and other waste and residue sourced from the circular economy. Total will not use vegetable oils as feedstock.

In this way, Total will be in a position to respond from its production sites in France to new French legislation that calls for aircraft to use at least 1% biojet fuel by 2022, 2% by 2025 and 5% by 2030.

The development of SAF is one of the strategic paths being pursued by Total to meet the challenge of carbon neutrality, as biojet fuels help reduce CO₂ emissions from air transportation.

“By producing sustainable aviation fuel at our French sites today, we are able to respond to strong demand from an aviation industry looking to reduce its carbon footprint, while adapting our industrial resources. As a broad energy company, we support our customers by providing innovative solutions to reduce their emissions. This commitment is fully aligned with Total’s climate ambition to get to net zero emissions by 2050,” said **Bernard Pinatel, President of Refining & Chemicals at Total.**

Total and Sustainable Aviation Fuel

Total is involved in numerous initiatives to produce and market sustainable aviation fuel in partnership with aviation industry partners. The Group will reach a new milestone in May 2021 with the creation of a dedicated Renewable Fuels Business Unit.

Sustainable Aviation Fuel is a practical alternative to fossil-based jet fuel. It significantly reduces the CO₂ emissions from air transportation and can be used as a drop-in fuel as of today, without any need to modify existing supply chain infrastructure, aircraft or engines.
