for everyone, everywhere

## ADOCIA confirms its eligibility for the PEA-PME

6pm CEST - Adocia (Euronext Paris: FR0011184241 - ADOC - the "Company") a clinical stage biopharmaceutical company focused on diabetes treatment with innovative formulations of approved proteins, confirms its eligibility for the "PEA - PME" stock savings tax regime, which decree has been published in the French *Journal Officiel* on March 4, 2014 (Decree n ° 2014-283), and which entered into force on March 6, 2014.

To be eligible for the "PEA - PME", the shares must have been issued by a company whose market capitalization is below one billion euros, of which no legal person holds more than 25% of its capital, which has less than 5,000 employees, and an annual turnover not exceeding 1.5 billion euros or a total balance sheet less than 2 billion euros.

Adocia meets all of these conditions.

### About Adocia

[ADOCIA](#) is a clinical-stage biotechnology company that specializes in the development of innovative formulations of therapeutic proteins and peptides for the treatment of diabetes, obesity and metabolic diseases. In the diabetes field, Adocia's portfolio of injectable treatments is among the largest and most differentiated of the industry, featuring five clinical-stage products and several pre-clinical products. The proprietary BioChaperone® technological platform is designed to enhance the effectiveness and/or safety of therapeutic proteins while making them easier for patients to use. Adocia customizes BioChaperone to each protein for a given application.

Adocia's clinical pipeline includes four novel insulin formulations for prandial treatment of diabetes: two ultra-rapid formulations of insulin analog lispro (BioChaperone® Lispro U100 and U200), a combination of basal insulin glargine and rapid acting insulin lispro (BioChaperone® Combo) and one combination of a prandial insulin with amylin analog pramlintide M1Pram. The clinical pipeline also includes an aqueous formulation of human glucagon (BioChaperone® Glucagon) for the treatment of hypoglycemia.

Adocia preclinical pipeline includes bi-hormonal combinations for diabetes treatment: two combinations of rapid acting insulin analogs and Pramlintide (BioChaperone® Lispro Pram and BioChaperone® Aspart Pram), a combination of insulin glargine with GLP-1 receptor agonists (BioChaperone® Glargine Liraglutide). In addition, there are two bi-hormonal products for the treatment of obesity: a combination of glucagon and exenatide (BioChaperone® Glucagon Exenatide) and a combination of pramlintide and exenatide (PramExe).

Adocia recently added a preclinical program to its pipeline with a cell therapy initiative focused on development of a hydrogel scaffold for use in people with type 1 diabetes. The first patent application supporting this program has been filed.
