

Oncodesign provides an update on its progress on RIPK2

- Strong interest from Big Pharma and major investors for this promising target
- ODS-101, the program's lead compound, has passed the IND filing stages
- Oncodesign's decision to strengthen the file and fund the voluntary Phase 1 trial due to the stakes involved
- Phase 1 scheduled to begin in 2022

Paris and Dijon (France), June 24, 2021 at 07:00 am CEST– Oncodesign (ALONC – FR0011766229) today announced that Oncodesign has decided to strengthen its preclinical file with new studies to further develop certain data, given the potential value of the RIPK2 program for the company and the financial investments made in ODS-101, as well as the strong interest from Big Pharma and major investors in this First-in-Class approach.

These new studies will focus in particular on the precise assessment of the therapeutic margin and the determination of the initial dose in humans through sophisticated modeling studies, and on the integration of a biomarker to more precisely measure the product's efficacy as early as in phase 1. As a result, the IND initially planned for mid-2021 has been postponed by a few months. Phase 1 will be organized and financed by Oncodesign in 2022, which is an essential step for a First-in-Class. This approach represents the best way to optimize the value of the RIPK2 program for potential buyers.

Following the success of the LRRK2 program in partnership with Servier, which is progressing well with significant milestones (Phase 1 expected in 2022), Oncodesign is now more than ever focused on securing a partnership for the RIPK2 program, and on starting new programs associated with Nanocyclix.

About ONCODESIGN: www.oncodesign.com

Oncodesign is a biopharmaceutical company dedicated to precision medicine, founded in 1995 by its current CEO and majority shareholder, and has been listed on Euronext Growth Market since April 2014. Its mission is the discovery of effective therapies to fight cancer and other diseases without therapeutic solutions. With its unique experience acquired by working with more than 800 clients, including the world’s largest pharmaceutical companies, along with its unique technological platform combining Artificial Intelligence, state-of-the-art medicinal chemistry, pharmacology, regulated bioanalysis, medical imaging, Oncodesign is able to select new therapeutic targets, design and develop potential preclinical candidates through to clinical phases. Oncodesign has configured its organization to offer innovative services to its customers and to license its proprietary molecules. Applied to kinase inhibitors, which represent a market estimated at over \$65 billion by 2027 and accounting for almost 25% of the pharmaceutical industry’s R&D expenditure, Oncodesign’s technology has already enabled the targeting of several promising molecules with substantial therapeutic potential, in oncology and elsewhere, along with partnerships with global pharmaceutical groups. Oncodesign is based in Dijon, France, in the heart of the town’s university and hospital hub, and within the Paris-Saclay cluster. Oncodesign has 233 employees within 3 Business Units (BU): Service, Biotech, Artificial Intelligence and subsidiaries in Canada and the USA. www.oncodesign.com
