

## **Advicenne announces the release of results of a study showing improved quality of life in patients living with DRTa and treated by ADV7103**

**Paris, 30 March 2022** – 6.00 pm CEST – Advicenne (Euronext: ALDVI), a pharmaceutical company specializing in the development and commercialization of innovative treatments for those suffering from rare renal diseases, today announces the publication, in the peer-reviewed journal Orphanet Journal of Rare Disease, results of a study showing improvement in the long-term quality of life in patients with distal Renal Tubular Acidosis (dRTA) and treated with ADV7103.

The patients' quality of life was assessed through interviews and conducted as part of the clinical development of ADV7103 after more than 5 years of treatment on average (62 +/- 6 months). The level of treatment satisfaction was 9 on a scale of 10 and the treatment met or exceeded expectations in 74% of patients (14 patients out of 17). These results confirm the interest of ADV7103 in the treatment of dRTA and the advantage of a bi-daily dosing compared to the usual management of this disease

The scientific paper is referenced below:
