

Transgene to Host KOL Webinar on TG4050: an Individualized Cancer Vaccine for the Treatment of HPV-Negative Head & Neck Cancers

Webinar to be held Wednesday, April 19, 2023 at 12:00 pm ET / 6:00 pm CET

Strasbourg, April 4, 2023 - 05:45 pm CET - **TRANSGENE (Paris: TNG)**, a biotech company that designs and develops virus-based immunotherapies for the treatment of cancer, today announces that it will host a virtual Key Opinion Leader (KOL) event on Wednesday, April 19, 2023 at 12:00 pm ET / 6:00 pm CET.

The KOL webinar will provide insights on TG4050 from expert medical oncologist Professor Christian Ottensmeier, MD, PhD, FRCP (University of Liverpool, La Jolla Institute for Immunology) who will also discuss the unmet medical need and outlook on treatment landscape for patients suffering from head and neck cancers. Prof. Ottensmeier's presentation will be followed by a Q&A session.

In addition, Transgene's management team will provide a company update, highlighting new Phase I data presented at AACR on April 18, 2023, confirming the high immunogenicity and promising efficacy profile of TG4050, an individualized neoantigen cancer vaccine developed by Transgene in collaboration with NEC Corporation.

To register for the event, please click [here](#).

Transgene will also present eight posters and have a booth (#310) at AACR which is taking place in Orlando, Florida, on April 14-19, 2023.

About Transgene

Transgene (Euronext: TNG) is a biotechnology company focused on designing and developing targeted immunotherapies for the treatment of cancer. Transgene's programs utilize viral vector technology with the goal of indirectly or directly killing cancer cells.

The Company's clinical-stage programs consist of a portfolio of therapeutic vaccines and oncolytic viruses: TG4050, the first individualized therapeutic vaccine based on the *myvac*[®] platform, TG4001 for the treatment of HPV-positive cancers, as well as TG6002, BT-001 and TG6050, three oncolytic viruses based on the Invir.IO[®] viral backbone. With Transgene's *myvac*[®] platform, therapeutic vaccination enters the field of precision medicine with a novel immunotherapy that is fully tailored to each individual. The *myvac*[®] approach allows the generation of a virus-based immunotherapy that encodes patient-specific mutations identified and selected by Artificial Intelligence capabilities provided by its partner NEC.

With its proprietary platform Invir.IO[®], Transgene is building on its viral vector engineering expertise to design a new generation of multifunctional oncolytic viruses. Transgene has an ongoing Invir.IO[®] collaboration with AstraZeneca. Additional information about Transgene is available at: www.transgene.fr
