

Sensorion Will Host a Webcast on March 14, 2024, to Announce its 2023 Annual Financial Results

Montpellier, March 6, 2024, 7.30am CET – Sensorion (FR0012596468 – ALSEN) a pioneering clinical-stage biotechnology company which specializes in the development of novel therapies to restore, treat and prevent within the field of hearing loss disorders, will publish its 2023 financial results on March 14, 2024, at 7.30am CET.

Sensorion's management team will host a webcast on March 14, 2024, at 6pm CET to present the Company's financial results and provide an update on the Company's activity.

The conference will be held in French and will be hosted by:

- Nawal Ouzren, Chief Executive Officer of Sensorion
- Géraldine Honnet, MD, Medical Director of Sensorion
- Laurent Désiré, PhD, Head of Preclinical Development at Sensorion

Registration for the video conference can be accessed by clicking on [this link](#).

Participants will be able to submit questions live via the Teams Conversation tool during the event.

Questions can also be submitted in advance to sensorion@ulyse-communication.com.

A replay of the webinar will be available on Sensorion's website.

About Sensorion

Sensorion is a pioneering clinical-stage biotech company, which specializes in the development of novel therapies to restore, treat and prevent hearing loss disorders, a significant global unmet medical need. Sensorion has built a unique R&D technology platform to expand its understanding of the pathophysiology and etiology of inner ear related diseases, enabling it to select the best targets and mechanisms of action for drug candidates. It has two gene therapy programs aimed at correcting hereditary monogenic forms of deafness, developed in the framework of its broad strategic collaboration focused on the genetics of hearing with the Institut Pasteur. SENS-501 (OTOF-GT) targets deafness caused by mutations of the gene encoding for otoferlin and is currently developed in a Phase 1/2 clinical study, and GJB2-GT targets hearing loss related to mutations in GJB2 gene to potentially address important hearing loss segments in adults and children. The Company is also working on the identification of biomarkers to improve diagnosis of these underserved illnesses.

Sensorion's portfolio also comprises clinical-stage small molecule programs for the treatment and prevention of hearing loss disorders. Sensorion's clinical-stage portfolio includes one Phase 2 product: SENS-401 (Arazasetron) progressing in two Phase 2 proof of concept clinical studies evaluating its efficacy to prevent Cisplatin-Induced Ototoxicity (CIO) and, with partner Cochlear Limited, to prevent residual hearing loss in patients scheduled for cochlear implantation. A Phase 2 study of SENS-401 was also completed in Sudden Sensorineural Hearing Loss (SSNHL) in January 2022.
