

## PRESS RELEASE

### **March 28, 1924: TotalEnergies is 100!**

**Paris, March 28, 2024** – Today, TotalEnergies' 100,000 employees in 120 countries worldwide are pleased and proud to celebrate the 100<sup>th</sup> anniversary of the Company's creation. TotalEnergies' 100-year history tells the story of the world and energy, from the 1920s to the present day.

#### **A bold and visionary decision**

On March 28, 1924, *Compagnie Française des Pétroles* was founded in France, a country without any oil. This bold and visionary move marked the start of a century-long saga. To secure France's energy supply, our company would travel to the four corners of the globe, adapting and growing throughout the century and its many technological and geopolitical upheavals.

#### **Pioneers for 100 years**

Unlike our rivals of the day, we did not have access to local resources. That is why we built our competitive advantage on international expansion and technical prowess. These two factors have shaped our pioneer spirit and our journey to this day. Over the years, we have continuously pushed back the boundaries – both technical and geographical – while also adapting to changing needs and customer expectations. This is how we accompanied the remarkable progress and development that took place in modern society during the 20<sup>th</sup> century. We also acquired additional expertise and experience by teaming up with *Petrofina* and *Elf-Aquitaine*, and more recently with *Maersk Oil*, *Saft* or *Direct Energie*.

#### **Becoming a multi-energy company**

While oil was the energy of the 20<sup>th</sup> century, natural gas and decarbonized power are central to the energy system of tomorrow. Natural gas is necessary to the energy transition, as a support for the rise of intermittent renewables and as a substitute for coal, which emits twice as much CO<sub>2</sub> in power generation. TotalEnergies is currently the world's third-largest player in liquefied natural gas (LNG). And in electricity, we are one of the most dynamic solar and wind power developers in the world. Electricity is the energy at the heart of decarbonization and the 21<sup>st</sup> century will clearly be electric.

#### **Driving the energy transition**

Since 2020, we have been resolutely implementing a transition strategy anchored around two pillars: hydrocarbons (including LNG) and electricity. We have the ambition to successfully achieve our transition and support our customers with theirs. Our challenge is to supply the world with the affordable energy required for its development while also reducing emissions. That is the "just, orderly and equitable" transition called for by COP28. Drawing on the pioneer spirit that guides us, we will continue to adjust and adapt as needed to be part of the story of energy for another 100 years!
