

Systar to Host European Virtual Road Show

Webinars on Capacity & Performance Management in Heterogeneous Physical & Virtual Environments

ST. CLOUD, France and Vienna, VA, March 14, 2011 - Systar (ISIN: FR0000052854-SAR), a leading provider of performance management software, today announced its European Virtual Road Show to address capacity and performance management challenges in heterogeneous physical and virtual environments.

With the rise of virtualization projects and cloud computing, many companies are reducing their infrastructure costs but are faced with an increased complexity and a high risk of losing control over quality of service. They must also cope with new challenges such as capacity planning in heterogeneous environments to meet business demands, services chargeback, optimization of test and development environments and performance management.

Throughout a series of multilingual webinars, Systar will demonstrate how OmniVision addresses these challenges. Systar's OmniVision is a powerful tool that delivers decision-support reports to monitor performance, capacity management and capacity planning. It enables IT managers to confidently manage physical and virtual infrastructure supporting critical applications, and to communicate objectively with internal customers and outsourcers.

In 30 minute sessions, production managers and their teams will learn how to get the most out of virtualization and cloud computing using OmniVision.

Plan Capacity to Meet Business Demands	English	March 22
	French	March 31
	Spanish	April 7
