

## WITH WINDOWS AZURE, OSIATIS ADDS A PaaS SOLUTION TO ITS CLOUD SERVICES PROPOSITION

Vélizy, France, 15 December 2011

Osatis, one of the main French IT services companies, is recognised as a leader in infrastructure services: architecture consulting, engineering tools and Cloud transformation, production and work environment outsourcing, critical systems and networks maintenance. In the application services market, the Group also addresses the specialised segment of infrastructure-related solutions: portals, collaboration, roaming, BI, etc.

The Group employs a workforce of almost 3,500 and is established in France, Austria, the Benelux countries and Spain.

After IaaS, SaaS and DaaS, Osatis completes its Cloud Services proposition with the addition of the Microsoft PaaS (Platform as a Service) building block. Windows Azure allows third parties to create and then operate web applications and services, such as hosting, storage and the administration of cloud computing applications. PaaS is in keeping with Osatis' strategy of offering its customers innovative services that are infrastructure-focused and take account of the application dimension.

Osatis' Windows Azure know-how is borne by its service centre in Rouen, whose consultants have already developed and opened up customer applications to the world of Microsoft cloud computing. Their expertise has led Microsoft to recognise Osatis as a member of its Windows Azure Circle.

Fabien van Laecken, Manager of the Osatis service centre stated: *"Complementarity between the cloud computing propositions we have developed based on our Osatis Cloud Center platform and the advanced functionalities of Azure have enabled us to offer our customers an extensive range of solutions and to design upgradeable environments with them, which can evolve as their business requirements change."*

*"Osatis will be able to take advantage of its expertise in the field of infrastructure to create new Windows Azure-associated services", stated Julien Lesaichere, Product Manager - Windows Azure for Microsoft France. "Osatis is able to create synergies between private and public clouds, in particular in cases of overflow or storage as a service. This new partnership will materialise the advantages of a hybrid cloud for many customers", he added.*
