Order for a Compact 21 research system in Argentina

Bezons, February 10th, 2012 – 7:00 am – RIBER, the global leader for molecular beam epitaxy (MBE), is announcing the sale of a Compact21 research system in Argentina.

The machine will be set up in the Institute of Nanosciences and Nanotechnologies of Bariloche in Argentina. It will enable the laboratory strengthen its development capacities for designing III-V component-based semiconductor systems.

The Compact21 MBE systems are the world's top-selling research systems. They offer unrivalled flexibility for use enabling it to meet the most demanding expectations for applied research on compound semiconductor materials.

The first sale in Argentina demonstrates the geographical diversification of RIBER.

About RIBER:

Riber designs and produces molecular beam epitaxy (MBE) systems as well as evaporation sources and cells for the semiconductor industry. This high-tech equipment is essential for the manufacturing of compound semiconductor materials and new materials that are used in numerous consumer applications, from new information technologies to OLED flat screens and new generation solar cells. Riber is listed on Euronext Paris Compartment "C" and is part of the CAC Small, CAC Mid & Small and CAC IT indexes. ISIN: FR0000075954 Reuters code: RIBE.PA Bloomberg code: RIB: FP
Riber has been innovation certified by OSEO, the dedicated French innovation agency, enabling it to qualify for French innovation mutual funds (FCPI).
