Press release – order in Japan

Order for a Compact 21 research system in Japan

Bezons, May 31, 2012 – 7:00 am – RIBER, the global leader for molecular beam epitaxy (MBE), is announcing the sale of a Compact21 research system in Japan.

RIBER is announcing the sale of a research system to a world famous research laboratory in Japan, wishing to modernize its fleet of MBE machines, while further strengthening its development capacities for designing III-V component-based Nanostructures (Quantum Dots and Photonic Crystals for telecommunications and quantum information device applications).

Customer said: "Compact 21 MBE system is the world's top-selling research system and we need it to meet our demanding expectations for applied research on new compound semiconductor materials".

This new order further strengthens RIBER's leading position in Japan, where the semiconductor research base and industry are particularly developed.

About RIBER:

Riber designs and produces molecular beam epitaxy (MBE) systems as well as evaporation sources and cells for the semiconductor industry. This high-technology equipment is essential for the manufacturing of compound semiconductor materials and new materials that are used in numerous consumer applications, such as new information technologies, OLED flat screens and new generation solar cells.

Riber is listed on Euronext Paris Compartment "C" and is part of the CAC Small, CAC Mid & Small and CAC IT indexes.

ISIN: FR0000075954 Reuters code: RIBE.PA Bloomberg code: RIB: FP

Riber has been innovation certified by OSEO, the dedicated French innovation agency, enabling it to qualify for French innovation mutual funds (FCPI).
