Press release – order in Germany

---

## Order for a Compact 21 research system in Germany

*Bezons, July 3rd, 2012 – 5:45 pm – RIBER, the global leader for molecular beam epitaxy (MBE), is announcing the completion in the end of June of the sale of a Compact21 research system in Germany.*

RIBER is announcing the sale of a research system to a research institute in Germany. The MBE machine will be devoted to the growth of III-V epitaxial nanostructures for applications in nanoelectronics and photonics. This order will significantly increase the institute's applied technology research and development capabilities.

Compact 21 is the MBE research system that has sold the most units in the world. It is highly flexible and offers great adaptability to meet the most demanding specifications of applied research on compound semiconductor materials.

This order will consolidate RIBER's position in the German market and confirms its significant expertise in semiconductor research.

### **About RIBER:**

Riber designs and produces molecular beam epitaxy (MBE) systems as well as evaporation sources and cells for the semiconductor industry. This high-technology equipment is essential for the manufacturing of compound semiconductor materials and new materials that are used in numerous consumer applications, such as new information technologies, OLED flat screens and new generation solar cells.

Riber is listed on Euronext Paris Compartment "C" and is part of the CAC Small, CAC Mid & Small and CAC IT indexes.

ISIN: FR0000075954 Reuters code: RIBE.PA Bloomberg code: RIB: FP

Riber has been innovation certified by OSEO, the dedicated French innovation agency, enabling it to qualify for French innovation mutual funds (FCPI).
