THIRD DATA AND SAFETY MONITORING BOARD MEETING FOR EFFIKIR TRIAL RECOMMENDS CONTINUATION AS PLANNED

Marseille, France, September 25, 2014

Innate Pharma SA (the "Company" - Euronext Paris: FR0010331421 – IPH), the innate immunity company developing first-in-class therapeutic antibodies for cancer and inflammatory diseases, today announces that the Data and Safety Monitoring Board ("DSMB") completed its third assessment of the EffiKIR study and recommended continuation of the trial, as planned.

Enrolment in the EffiKIR study was completed in July 2014 and data on the primary endpoint, Leukemia-Free Survival, are expected end of 2015.

As specified in the study protocol, the DSMB meets every six months to examine the safety data accumulated during progress of the trial. A DSMB is a committee of independent clinical research experts who review data in ongoing clinical trials with particular attention to safety. DSMBs are customarily established for large randomized multisite studies.

About EffiKIR (study IPH2102-201):

EffiKIR is a double-blind placebo-controlled randomized Phase II trial of lirilumab as maintenance treatment in elderly patients with Acute Myeloid Leukemia ("AML") in first complete remission.

The protocol called for inclusion of 150 patients, randomized into three arms. Two arms test single agent lirilumab at different doses and treatment intervals and in the third arm, patients receive placebo. The primary efficacy endpoint is leukemia-free survival. Secondary endpoints include safety and overall survival.

The rationale of this trial is based on the capacity of activated Natural Killer (NK) cells to directly kill tumor cells and trigger broad immune activation. This rationale is supported by clinical studies showing that activated NK cells can significantly lower the recurrence of various hematological malignancies, including AML, following hematopoietic stem cell transplantation*.

This trial is sponsored by Innate Pharma and is performed in France, with the participation of the two French clinical cooperative groups, ALFA and GOELAMS[†], harnessing the research effort of the French centers qualified to treat patients with AML.

About lirilumab (IPH2102/BMS-986015):

Lirilumab is a fully human monoclonal antibody (mAb) blocking interaction between Killer-cell immunoglobulin-like receptors (KIR) on NK cells and their ligands. Blocking these receptors facilitates activation of NK cells and, potentially, destruction of tumor cells.

Lirilumab is licensed to Bristol-Myers Squibb Company (NYSE: BMY). As part of the agreement between Innate Pharma and Bristol-Myers Squibb, Bristol-Myers Squibb holds exclusive worldwide

* Ruggeri et al, *Blood*, 2007, Giebel et al., *Blood*, 2003, Velardi et al, *Science*, 2002

† ALFA : Acute Leukemia French Association. GOELAMS : Groupe Ouest-Est des Leucémies Aiguës et Maladies du Sang (Acute Leukemia and Blood Diseases West-Est Group)

rights to develop, manufacture and commercialize lirilumab and related compounds blocking KIR receptors, for all indications. Under the agreement, Innate Pharma conducts the development of lirilumab through Phase II in AML.

In addition to the EffiKIR trial, where lirilumab is currently being tested in a randomized, double-blind, placebo-controlled Phase II trial in elderly patients as a single-agent in AML, lirilumab is also being evaluated by Bristol-Myers Squibb in clinical trials in combination with other immunology agents in a variety of tumor types.

About Innate Pharma:

Innate Pharma S.A. is a biopharmaceutical company discovering and developing first-in-class therapeutic antibodies for the treatment of cancer and inflammatory diseases.

Its innovative approach has translated into major alliances with leaders in the biopharmaceutical industry such as Bristol-Myers Squibb and Novo Nordisk A/S.

The Company has two clinical-stage programs in immuno-oncology, a new therapeutic field that is changing cancer treatment by enhancing the capability of the body's own immune cells to recognize and kill cancer cells. Innate Pharma science also has potential in chronic inflammatory diseases.

Listed on Euronext-Paris, Innate Pharma is based in Marseille, France, and had 90 employees as at June 30, 2014.
