

The Michelin Group raises its tire prices in order to pass on the increase in raw material costs.

Because of the increase in raw material costs – and especially natural rubber, butadiene and oil – Michelin has announced that it is raising the price of its tires in the European replacement market. This increase, which may be as high as 8%, depending on the tires, for the Passenger Car & Light Truck, Truck, Earthmover, Agricultural and Two-Wheel segments, will take effect by the end of first-quarter 2017. Depending on the changes in raw material costs, the Group could revise the price positioning of its products.
