

Sercel Improves Versatility of 508^{XT} Land Acquisition System with New WTU-508 Node

Paris, France - June 13, 2017

CGG announced today that Sercel has launched the WTU-508 high-performance X-Tech® node as an extension of its 508^{XT} land seismic acquisition product range. The new node offers even greater flexibility for all types of survey operations, such as complex small-scale urban surveys or high-productivity mega-crews. Fully integrated into the existing 508^{XT} platform, it reinforces the new paradigm created by the 508^{XT} in land seismic acquisition.

The WTU-508 is an easy-to-use smart autonomous land node. Users need only to connect the geophone for the WTU-508 to record its position and start collecting seismic data. Data is stored in its internal memory and ready for retrieval on the fly using Sercel's latest-generation high-speed wireless harvesting.

The WTU-508 also features Sercel's new XT-Pathfinder transmission management technology providing quality control information to the land seismic recorder wirelessly and without the need for any additional infrastructure. XT-Pathfinder does this by creating a network that finds the most reliable QC data path to the seismic recorder while automatically adapting to any survey changes, minimizing field effort and troubleshooting as the survey progresses.

Pascal Rouiller, Sercel CEO, said: "Since the launch of our 508^{XT} land acquisition system, more than 125,000 channels have been delivered worldwide to our customers. Our introduction of the new WTU-508 node complements our current 508^{XT} product range and gives the 508^{XT} even greater operational flexibility as the land seismic acquisition system of choice."

Sercel's new **WTU-508** node offers even greater flexibility for all types of survey operations, such as complex small-scale urban surveys or high-productivity mega-crews (image courtesy of Sercel).

About CGG

CGG (www.cgg.com) is a fully integrated Geoscience company providing leading geological, geophysical and reservoir capabilities to its broad base of customers primarily from the global oil and gas industry. Through its three complementary businesses of Equipment, Acquisition and Geology, Geophysics & Reservoir (GGR), CGG brings value across all aspects of natural resource exploration and exploitation. CGG employs around 5,600 people around the world, all with a Passion for Geoscience and working together to deliver the best solutions to its customers. CGG is listed on the Euronext Paris SA (ISIN: 0013181864) and the New York Stock Exchange (in the form of American Depositary Shares. NYSE: CGG).
