

## Order for two research MBE systems in China

Bezons, April 3, 2018 - 5:45 pm - RIBER, a global market leader for semiconductor industry equipment, is announcing the order for two research MBE systems.

A Chinese research institute has ordered two research fully-automated MBE systems, model MBE412, for developing solar cells devices.

The MBE412 system allows making epitaxies on 4" wafer diameter or on multiple 2" wafer diameter. It is mainly used for the development of new microelectronic or photo-electronic devices, as well as their qualification before going into full production.

This new order will be delivered in 2019.

## **About RIBER:**

Riber designs and produces molecular beam epitaxy (MBE) systems as well as evaporation sources and cells for the semiconductor industry. This high-tech equipment is essential for the manufacturing of compound semiconductor materials and new materials that are used in numerous consumer applications, from new information technologies to OLED flat screens and next-generation solar cells.

Riber is listed on Euronext Paris (Compartment "C") and is part of the CAC Small, CAC Technology and CAC T. HARD. & EQ indices. Riber is eligible for SME share-based savings schemes.
