Cybernetix announces a new contract for the Japanese Nuclear market.

Cybernetix, a world leader in innovating solutions in robotics and automation for interventions in hostile environments, is pleased to announce the signature of a new contract with IHI Corporation. Through this contract, Cybernetix will design end to end remote handling equipment for operations in highly irradiated nuclear facilities in Japan.

Through this award IHI Corporation recognizes the unique expertise of Cybernetix in remote handling equipment dedicated to the Nuclear Industry, whereas, with this new contract, Cybernetix strengthens its position on the Japanese Nuclear Market.

About IHI Corporation

IHI, established in 1853, is a multi-national leader in providing energy and chemical plants, physical distribution systems and steel structures, aero-engine and space technology, industrial machinery, shipbuilding and marine engineering, and mass-produced machinery. With annual net sales of nearly \$13 billion (U.S. dollars) and more than 24,000 employees, IHI contributes to the stable supply of electric power by providing the primary equipment for hydroelectric, thermal and nuclear power systems. In nuclear power generation, IHI supplies main components such as reactor pressure vessels, primary containment vessels and piping systems. IHI is also involved in the development and construction of systems related to nuclear fuel recycling.

About Cybernétix

Cybernetix is a leading provider of remotely operated or robotic systems for interventions in hostile environments. The Group operates in two main markets: Energies (oil & gas, nuclear) and Industries. Cybernétix counts 145 employees and has developed a world-class engineering and services expertise in project management, and integration of global solutions, operating in 15 countries.
