Press release

Eiffage, member of the NSORe joint venture, wins the contract for a converter station for the NSC2 offshore grid connection project in Germany

Eiffage, through its Belgian subsidiary Smulders, created NSORe (Neptun Smulders Offshore Renewables) with Neptun Werft, part of the Meyer Werft group. NSORe is an equal joint venture dedicated to HVDC (High Voltage Direct Current) offshore substation projects.

NSORe, as part of a consortium with Siemens Energy, has just been awarded by 50Hertz, the transmission system operator in the north and east of Germany, the contract to build a 2-gigawatt converter station for the offshore grid connection project NSC2 (North Sea Connector 2).

Negotiations have also started for a second project of similar scale.

The project already awarded consists of an offshore platform and onshore station. The consortium is responsible for the complete implementation and turnkey handover of the facilities. This includes planning the overall system, procuring components, construction, installation onshore and offshore, and commissioning.

NSORe is responsible for the engineering and construction of both the topside – the main structure of the offshore platform, housing transformers, switchgear, and converters that transform alternating current into direct current – and the jacket foundation. Production will take place across facilities in Rostock and Vlissingen, supporting long-term industrial activity. Siemens Energy is responsible for the high-voltage elements, including the onshore station.

Commissioning of the NSC2 platform is scheduled for the end of 2034.

**About Eiffage**

Eiffage is one of Europe's leading construction and property development, energy services and concessions companies. Established in the major European markets, the Group aspires to be a key player in the environmental transition, energy sovereignty and sustainable mobility while actively contributing to creating the cities and infrastructure of tomorrow. Thanks to the experience of its 87,000 employees, Eiffage generated revenue of €25.3 billion in 2025, of which nearly 36% was outside France.

About Eiffage Métal and its subsidiary Smulders

Eiffage Métal is a market leader in turnkey metal construction with a peerless network of manufacturing facilities across Europe. Renowned for its ability to create large-scale structures combining technical sophistication and innovation, Eiffage Métal is highly active in the renewable energies market, in particular wind and nuclear, as well as engineering structures, building shells and facades. With 19 production sites and assembly facilities in Europe, Eiffage Métal is established in Belgium, France, Germany, the Netherlands, Poland, Portugal, Spain and the United Kingdom. Thanks to the efforts of its 3,450 employees, Eiffage Métal generated revenue of €1.7 billion in 2025.
