About Waga Energy

Waga Energy (EPA: WAGA) produces competitively priced Renewable Natural Gas – RNG – (also known as “biomethane”) by upgrading landfill gas using a patented purification technology called WAGABOX®. The RNG produced is injected directly into the gas distribution networks that supply individuals and businesses, providing a substitute for fossil natural gas. Waga Energy finances, builds and operates its WAGABOX® units under long-term contracts with landfill operators for the supply of raw gas, and generates income by selling the RNG it produces or by offering a purification service. Waga Energy operates 22 units (owned or sold) in France, Spain, Canada and the US, representing an installed capacity of 895 GWh per year (3,000,000 MMBtu). Each project initiated by Waga Energy contributes to the fight against global warming and helps the energy transition. Waga Energy is listed on Euronext Paris.
