

**PRESS RELEASE**

Figeac, France, 17 March 2026

THREE NEW WINS IN MEXICO

FIGEAC AÉRO (FR0011665280 – FGA:FP), a leading partner for major aerospace manufacturers, announces that it has signed several new contracts under which its Mexican operations will manufacture various mechanical components for assembling passenger seats, electrical harnesses and landing gears used in today's commercial fleets. These deals are expected to generate annual revenue of \$1.5 million.

Having participated in three separate requests for quotations in North America, FIGEAC AÉRO has been selected to produce parts used in the assembly of equipment to be fitted in various Airbus, Boeing and Bombardier commercial aircraft families. The first one includes part numbers for passenger seats selected by airlines and subsequently fitted in many different types of aircraft; the second is for a series of housings and support kits involved in installing electrical harnesses for Boeing's aircraft families; and the final third is for machined aluminium landing gear parts fitted to Bombardier's business jets.

All productions are to be carried out at the Group's Chihuahua facility in Mexico. In addition to the team's demonstrated expertise, another determining factor in the customers' choice was the proximity of the facility to that of the clients. Yet another factor was the high technological level of the facility's production means and assembly capacity, a result of the Group's proactive strategy of reinvesting in Mexico after having sold its Hermosillo facility in 2022.

FIGEAC AÉRO expects these deals to generate \$1.5 million in annual revenue, helping to optimise the Mexican facility's utilization rate and thus helping to further improve profitability. The first deliveries will all be made during the course of 2026.

Business development in North America has been cited among the Group's top priorities under its PILOT 28 plan. The Wichita and Chihuahua facilities represented only around 5% of the Group's total revenue at 31 March 2025, but the region now accounts for a third of the new business it has brought in since the launch of PILOT 28.
