

PRESS RELEASE

- **Signing of the 100th “Global Service Evolutive” contract -**
- **Confirmation of our leadership in Ambient Air -**
- **Penetration of the new Large Combustion Plant market -**

Poissy, 20th March 2007:

Environnement SA, a major player in instrumentation for the environment, announces the signing of a number of contracts that reaffirm its dynamism on its various segments of activity and strengthen its position as a world leader in instrumentation for the environment.

Signing of the 100th “Global Service Evolutive” (GSE) contract

With the implementation of the system for controlling emissions from the household waste incineration unit in Vernou en Sologne (Loir et Cher, France), Environnement S.A is celebrating its 100th GSE service contract. These high value-added service contracts for supplying the results of measurements within the framework of medium and long-term contracts (3 to 14 years) are enabling Environnement S.A to significantly increase its recurrent revenue. This 100th contract thus confirms the soundness of this new service recently developed by Environnement S.A's teams.

Another contract in Ambient Air in the Middle East

Environnement S.A announces the signing of a major contract in Saudi Arabia, via the Company's local representative: 14 air quality monitoring stations will be delivered for Riyadh's air quality monitoring network. Indeed, Saudi Arabia has, in recent decades, recorded very rapid industrial growth, which requires the taking into account of emerging environmental issues. This contract confirms Environnement S.A's solid presence in the Middle East, following the contract signed for monitoring air quality in Abu Dhabi. This success can also be explained by the Company's strategic choice to set up, in the first half of 2006, a Middle East support and service centre based in the UAE. Environnement S.A is thus further reinforcing its world leadership in air quality monitoring networks.

First contract on a high-potential market: Large Combustion Plants

Environnement S.A recently announced its intention of penetrating the new Large Combustion Plant market as a result of the application of European Directive 2001/80/EC (LCPD). A number of orders have already been registered on this sector, and today the energy giant E.On has confirmed the relevance of Environnement S.A's solutions by entrusting the Company with the equipping of a number of sites. Atmospheric discharges from 6 E.On gas turbines located in the United Kingdom will thus be permanently monitored by brand new MIR 9000 CLD analysers. This contract confirms the capacity for innovation and the expertise of Environnement S.A's Research & Development teams with regards to permanently adapting its products to its clients' needs.

François Gourdon, the Group's Chairman, concludes: "The new contracts obtained in Ambient Air and the new Large Combustion Plant market confirm the dynamism of our activity, and yet again illustrate Environnement S.A's capacity to rapidly respond to global regulatory changes. We are also very pleased to announce our 100th GSE contract, which further reinforces the Company's "service" activity and thus the long-term visibility and durability of our revenues."

**Next press release: FY 2006 earnings
on 23rd April 2007, after market**

About ENVIRONNEMENT S.A (www.environnement-sa.fr): Listed on Alternext by EuronextTM Paris since January 2006, Environnement S.A is a major player in instrumentation for the environment. For 25 years, the mission of Environnement S.A has been to provide public and private operators with the necessary tools to assess and measure the impact of human activities on ecosystems. The company has today a strong know-how in instrumentation for the environment in 4 main sectors: ambient air monitoring, industrial emissions monitoring, water quality monitoring and engine gas monitoring. In 2005, Environnement S.A consolidated revenues amounted to €42m, an increase of +38.4% compared with 2004, for net earning of €2.9m, an increase of +262%.
