INFORMATION ON THE UNDERLYING

Performance of Underlying/formula/ other variable, explanation of effect on value of investment and associated risks and other information concerning the Underlying:

General: Fluctuations in the value of the Underlying will have an effect on the value of the Securities throughout the life of the Securities and at maturity/expiration. The value of the Underlying may go down or up throughout the life of the Securities.

Automatic Termination: If the value or performance of the Underlying on a specified date meets certain specified conditions, it will affect the value of the Securities, and will potentially lead to the automatic termination of the Securities.

Negative Correlation: All other things being equal, negative performance of the Underlying will have a positive effect on the value of the Securities at maturity/expiration, and positive performance of the Underlying will have a negative effect on the value of the Securities at maturity/expiration.

Leverage: All other things being equal, positive or negative changes in the performance of the Underlying will have a

proportionately larger effect on the value of the Securities, and therefore leverage has the potential to magnify gains or losses of the Securities.

No Capital Protection: All other things being equal, the value or performance of the Underlying will affect the value of the Securities at maturity/expiration, to such an extent that the value of the Securities at maturity/expiration may be zero.

FX Adjustment: The value of the Securities at maturity/expiration will be affected both by the value or performance of the Underlying and by the performance of the relevant FX rate between the currency of the Underlying and the currency of the Securities.

Futures Contracts: Futures contracts have fixed expiration dates and upon expiration they are rolled into new futures contracts with a later maturity date. The purchase price of the new futures contracts may be more, or less, than the expiration price of the expiring futures contracts. This means that the Securities may then be linked to fewer, or more, futures contracts than before the expiration of the old futures contracts. When linked to a smaller number of futures contracts, the performance of the Underlying will have a proportionately smaller effect on the value of the Securities at maturity/expiration. Conversely, when linked to a larger number of futures contracts, the performance of the Underlying will have a proportionately larger effect on the value of the Securities at maturity/expiration.
