

## **Sercel Awarded Major Seismic Equipment Contract in North Africa**

*PARIS, France – September 28, 2021*

CGG announced today the award to Sercel of a major contract to supply land seismic equipment for a 3D mega-crew survey in North Africa. It includes a 508<sup>XT</sup> acquisition system with 100,000 QuietSeis® digital sensors and a fleet of twenty Nomad 90 Neo broadband vibrator trucks. The equipment is expected to be delivered in Q4 2021.

The addition of these 100,000 digital sensors confirms the increasing industry enthusiasm for low-noise and high-accuracy sensor technology. QuietSeis leads this field and is the only sensor fully capable of meeting the industry's expectations for true broadband seismic. Sercel's comprehensive and diversified product portfolio meets all survey requirements today, providing the best fit for our customer's needs.

Emmanuelle Dubu, Sercel CEO, said: "We are grateful to all our customers who have placed their trust in our state-of-the-art solutions, and we are proud to accompany them in what is truly a paradigm shift in generating, recording and managing the data required for precision imaging. This is perfectly illustrated by this new award: the combination of the QuietSeis digital MEMS sensor and the Nomad 90 Neo vibrator source is the winning combination for 21<sup>st</sup> century broadband seismic."

### **About CGG**

*CGG ([www.cgg.com](http://www.cgg.com)) is a global geoscience technology leader. Employing around 3,700 people worldwide, CGG provides a comprehensive range of data, products, services and solutions that support our clients to more efficiently and responsibly solve complex natural resource, environmental and infrastructure challenges. CGG is listed on the Euronext Paris SA (ISIN: 0013181864).*
