Solutions30
Solutions for New Technologies

PRESS RELEASE
NOVEMBER 18, 2026 – 6:00 p.m.

Solutions30 strengthens its position in the power grid and electric mobility markets with new contracts in Belgium and Poland

Solutions30, the European leader in proximity multi-technical services for the telecommunications, energy and digital sectors, announces the award of several new contracts in the energy sector with distribution network operators and major industry players in Belgium and Poland. These contracts cover power grid modernisation and maintenance activities as well as the deployment of electric vehicle charging (EVC) infrastructure, two key markets supporting Europe's energy transition.

In Belgium, Solutions30, through its subsidiary Unit-T, has been selected by an electricity and gas distribution network operator to support the deployment of smart meters in the Brussels-Capital Region. This framework agreement, with an initial term of four years and a maximum term of 8 years, covers the replacement of existing electricity meters with a new generation of smart devices and represents a projected volume of up to approximately 18,000 meters per year.

In Poland, Solutions30 has secured several contracts for the modernisation and expansion of electricity networks in the northern and central part of the country, including the installation and upgrading of distribution infrastructure, transformer substations and related electrical equipment, as well as the associated civil engineering works. These contracts demonstrate Solutions30's ability to leverage experienced local teams, in-depth knowledge of its customers' infrastructure and recognised expertise in executing critical projects that enhance the reliability and performance of electricity networks.

Solutions30 has also been selected to support the deployment of electric vehicle charging infrastructure with several customers in whole Poland. Solutions30 will deliver services across the entire value chain, from preparatory works and administrative procedures through to the installation, commissioning and maintenance of charging stations. This contract highlights the Group's expertise in delivering turnkey e-mobility projects and its ability to optimise deployment schedules while maintaining a high level of service quality.

These new contracts build on the Group's long-standing strengths: a strong local presence, experienced technical teams, proven execution capabilities and recognised expertise in managing complex end-to-end projects.

"These new contracts confirm the relevance of our repositioning towards the energy markets, which we have identified as our main growth driver. They are part of a sustained commercial momentum, also reflected in the award of several new contracts in the technology sector. Thanks to our technical expertise, local presence and ability to operate across the entire value chain, we are well positioned to support the deployment, modernisation and maintenance of the infrastructures that are essential to Europe's energy transition," said Gianbeppi Fortis, Chairman of the Management Board of the Solutions30 Group.
