

FDE Accelerates Its Growth in Norway with the Strategic Acquisition of Romerike Biogassanlegg AS, a Major Renewable Natural Gas Production Facility in Oslo

A Producing, Cash-Generative Asset: Immediate Value Creation Powered by FDE's In-House Operational Expertise

Pontpierre, France, July 3rd 2026 - La Française de l'Énergie (FDE - Euronext : FDE - ISIN : FR0013030152, a low-carbon energy producer, announces the acquisition of Romerike Biogassanlegg AS ("RBA" or the "Company"), an already **operating, cash-generative facility for the treatment of household waste and the production of Renewable Natural Gas (RNG)**, following a competitive bidding process launched by the City of Oslo.

FDE is strengthening its presence in Norway with the acquisition of an already operational, revenue-generating RNG production facility

Thanks to its technical expertise and the quality of its operating model, which ensures stable and sustainable service, FDE was selected by the City of Oslo to take over the assets of Romerike Biogassanlegg AS.

The operational plant, with a capacity of 50,000 metric tons of feedstock and located near Oslo-Gardermoen Airport, is part of a circular economy and sustainable development initiative. The facility benefits from **direct access to feedstock - particularly municipal biowaste - efficient digestate recovery systems, and proximity to major consumers of green natural gas (RNG)**.

Spanning 4 hectares, the site is connected to the power grid via a 4 MW line, with available headroom pre-acquisition, offering potential for optimizing operations and **scaling up a multi-energy platform**.

This transaction is fully in line with FDE's strategy to develop RNG production infrastructure in Norway, complementing the Group's organic projects.

Gradual value creation with a positive impact expected as early as fiscal year 2027

The transaction involves the acquisition of 100% of the Company's equity for a **price of €4.5 million**. This acquisition was financed with equity and finalized on June 30th, 2026.

The RBA plant currently processes 20,000 metric tons of household waste per year, producing 15 GWh of RNG, and already generates **annual revenues exceeding €5 million** from inception. RNG produced is also utilized in Oslo's vehicle fleet under an offtake agreement with a reputable utility company.

This acquisition strengthens FDE's position in the circular economy value chain by combining local waste treatment with large-scale production of RNG for the Norwegian market. It is also expected to be **earnings-accretive to the Group's results** from the first year of consolidation.

Significant growth potential in processed volumes and RNG production

FDE will immediately implement several initiatives to **improve the plant's operational performance** in the very short term, with the aim of increasing processed and offtake volumes and realizing cost synergies to maximize EBITDA, in anticipation of the **planned ramp-up in production by 2027**. These initiatives will be led on the ground by Alltec, FDE's Norwegian operating subsidiary, ensuring fast, in-house execution from day one with the existing RBA team.

In a second phase, the revamping and integration of a Cryo Pur unit for liquefaction and the production of liquid RNG and liquid CO₂ will enable production to reach **75 GWh per year**. This retrofit will be carried out entirely in-house, drawing on the combined technical expertise of Cryo Pur, the Group's proprietary

liquefaction technology, and Alltec- a further illustration of FDE's integrated, capital-efficient approach to value creation.

In addition to this unit, which is already in production, the construction of the Halså biogas plant-with an annual production capacity of 120 GWh-is proceeding according to schedule, with commissioning expected by the end of 2027. The Stavanger and Alver plants, of similar design and size, will complete the Group's RNG production capacity in Norway in 2028. Once these four units are operational, FDE will reach a **total RNG production capacity of over 400 GWh per year**, thereby significantly strengthening its industrial position in the Norwegian biomethane market.

Antoine Forcinal, FDE Chief Executive Officer, commented: "We are very proud to have been selected by the City of Oslo to acquire and operate its household waste treatment and RNG production facility. This transaction is yet another example of our ability to capitalize on external growth opportunities in our strategic markets while developing our own projects through organic growth. Norway is a key market for FDE. Establishing this long-term partnership with the City of Oslo, as part of its waste-to-energy initiative, gives us immediate access to an operational, cash-generative facility to which FDE will contribute its unique in-house expertise to optimize performance, with the goal of eventually developing a leading low carbon energy production platform on the outskirts of the Norwegian capital."

This acquisition reinforces the FDE Group's 2030 goals, which include annual revenue of more than €175 million, EBITDA exceeding €85 million, and the avoidance of more than 20 million metric tons of CO₂-equivalent emissions per year.
