

## Hoffmann Green reports record business volume in the first half of 2026 and provides an update on its business

- Nearly 40,000 metric tons sold and delivered in the first half of 2026, double the volume compared to H1 2025
- Continued strong sales momentum and the recording of the 1,000<sup>th</sup> production order for H2 vertical factory
- Signing of 9 commercial and industrial partnerships in H1 2026
- Private placement of approximately €5 million completed in June 2026 to support strong accelerated growth and bring its equity to more than 60 million euros

### PRESS RELEASE - July 2026

**Chaillé-sous-les-Ormeaux, July 6, 2026 – 8:00 a.m. CEST:** Hoffmann Green Cement Technologies (ISIN: FR0013451044, Ticker: ALHGR) (“Hoffmann Green Cement” or the “Company”), an industrial player committed to the decarbonation of the construction sector that designs and markets innovative cold produced, clinker-free cements, announces record production volume for the first half of 2026 and provides an update on its operations.

**Julien BLANCHARD and David HOFFMANN, Co-founders of Hoffmann Green Cement Technologies,** say: *“The first half of 2026 marks a new phase of growth for Hoffmann Green. With nearly 40,000 metric tons sold and delivered - more than double the volume achieved in the first half of 2025 - we are demonstrating that our 0% clinker cements meet the expectations of a growing number of major players in the construction industry. Reaching the milestone of our 1,000<sup>th</sup> production order for H2 vertical factory, signing nine strategic partnerships, and continuing to ramp up our industrial capacity illustrate the Company’s scaling up. This strong momentum allows us to confidently confirm our target of 100,000 metric tons for the full 2026 fiscal year, as the second half of the year is typically stronger than the first. The recent private placement completed gives us the means to accelerate this trajectory, launch the initial phases of the H3 project, and consolidate our technological leadership in 0% clinker cements.”*

#### **Continued record-breaking performance with a production volume of nearly 40,000 metric tons in the first half of 2026**

In the first half of 2026, Hoffmann Green sold and delivered nearly 40,000 metric tons of cement, representing a 104% increase compared to the first half of 2025 and nearly five times the volume recorded in the first half of 2024.

The Company also reached the milestone of its 1,000<sup>th</sup> production order for H2 vertical factory. This milestone reflects the continued strengthening of its network of partners across the entire construction value chain, the ramp-up of its production capacity, and the success of its strategy to diversify its target markets.

This growth strengthens Hoffmann Green’s confidence in its goal of selling and delivering 100,000 metric tons over the full 2026 fiscal year, which is traditionally marked by higher activity in the second half. This scale is already translating into significant savings on material costs, estimated at between 5 and 8 M€ in 2026.

## Continued Business Momentum: Signing of 9 Strategic Partnerships

Following a 2025 marked by an unprecedented acceleration in commercial and industrial partnerships, Hoffmann Green continued this momentum in the first half of 2026 with the signing of nine partnerships:

- **GSE**, a general contractor operating in France and Europe;
- **Telamon**, a real estate developer and investor;
- **Briand**, a group combining expertise in concrete, wood, and metal construction;
- **Biobuild**, a specialist in infrastructure for renewable energy;
- **Ouest Réalisation**, as part of a major private construction project in the Nantes region;
- **Le Coq Construction**, a structural and general masonry contractor in Brittany;
- **Bruil**, a ready-mix concrete supplier in the Netherlands, as part of an agreement aimed at preparing for the signing of a licensing agreement;
- **Groupe Angevin**, through a new agreement with its subsidiary Angevin Île-de-France, which specializes in structural projects in the Île-de-France region;
- **NOREE Construction**, a company in western France active in agricultural civil engineering and outdoor aquatic facilities.

These new partnerships illustrate the growing adoption of Hoffmann Green solutions across the entire construction ecosystem. They provide a solid foundation for accelerating volume growth, expanding the customer base, and establishing Hoffmann Green's long-term presence in its markets.

## Completion of a private placement of approximately €5 million to support the acceleration of the Company's very strong growth

In June 2026, the Company completed a private placement designed to provide it with additional financial resources to support its industrial and commercial strategy and continue investing in its R&D capabilities.

More specifically, the net proceeds from this financing of approximately €5 million, raised from leading investors committed to funding innovative sectors and companies with a positive impact, are intended, in particular, to:

- support the ramp-up in production volumes and cost optimization associated with mass production, accounting for approximately 60% of the net proceeds;
- fund the initial stages of the new H3 production site project, which is scheduled to come online in 2029 in the Rhône-Alpes region, accounting for approximately 25% of the net proceeds;
- continue research and development efforts, accounting for approximately 15% of the net proceeds.

## ABOUT HOFFMANN GREEN CEMENT TECHNOLOGIES

Founded in 2014 and based in Bournezeau (Vendée, Western France), Hoffmann Green Cement Technologies designs, produces and distributes innovative extremely low-carbon cements – with a carbon footprint 5 times lower than traditional cement – that present, at equivalent dosage and with no alteration to the concrete manufacturing process, superior performances than traditional cement.

Hoffmann Green operates two production units powered by a solar tracker park on the Bournezeau site: a 4.0 factory and H2, the world's first vertical cement plant inaugurated in May 2023. A third factory will be built in the Rhône-Alpes region with construction scheduled for 2027-2028 to bring the Group's total production capacity to around 1,000,000 tons per year. The group has industrialized a genuine technological breakthrough based on modifying cement composition and creating a cold manufacturing process, with 0% clinker and low energy consumption, making it a leading and unique player in the cement market that has not evolved for 200 years.

In a context of climate urgency and energy price inflation, Hoffmann Green Cement actively participates in energy transition by producing clean 0% clinker cement that consumes 10 to 15 times less energy than Portland cement. It also promotes eco-responsible construction and encourages circular economy and natural resource preservation. With its unparalleled and constantly evolving technological expertise, driven by high-performing teams, Hoffmann Green Cement Technologies serves all markets in the construction sector, both in France and internationally.

Hoffmann Green was selected among the 2022 promotion of the top 20 French green startups as part of the French Tech Green20 program, led by the French Tech Mission in partnership with the Ministry of Ecological Transition. In June 2023, the company was selected for French Tech 2030, a new ambitious support program operated by the French Tech Mission alongside the General Secretariat for Investment (SGPI) and Bpifrance.

The company continues its international development through a licensing company model with contract signings in the United Kingdom and Ireland, Saudi Arabia and in the United States.
