

2CRSi announces a €110 million¹ sale of Godi Blackwell Ultra servers in Germany

The order, for 194 AI servers, has been paid for in full by the customer, with over 50% of shipments scheduled to take place this week and the remainder before the end of the financial year

Strasbourg, France – 09/06/2026 – 2CRSi (ISIN: FR0013341781), a designer and manufacturer of high-performance, energy-efficient servers, announces a new sale of Artificial Intelligence servers to a German company based in Munich and specialising in professional services, systems integration, management consultancy and global solutions services.

This order comprises 194 2CRSi Godi Blackwell Ultra servers, with a total catalogue value of €110 million. It illustrates the strong growth in European demand for next-generation artificial intelligence infrastructure, designed to meet businesses' growing needs for high-performance computing, model training, AI inference, automation and big data processing.

The full amount of the order has already been paid by the customer. The components required to fulfil this order have also been secured and paid for, enabling 2CRSi to commence shipments within a very short timeframe. This financial structure significantly reduces the working capital requirements associated with the operation and ensures its successful industrial execution.

The first batch of the order, accounting for over 50% of the total, will be shipped as early as this week. The remainder will be delivered by the end of June 2026, in line with the close of 2CRSi's 2025/2026 financial year.

Servers designed for ultra-high-performance AI infrastructures

The 2CRSi Godi Blackwell Ultra servers are designed to handle the most demanding workloads of modern artificial intelligence. They are particularly suited to computing environments dedicated to large language models, generative AI, large-scale inference, intensive scientific computing and digital transformation applications requiring high-density GPU architectures.

This new order confirms the appeal of 2CRSi's solutions among European IT integrators, who are playing an increasingly important role in the deployment of AI infrastructure for businesses, technology firms, institutions and digital service providers.

¹ List price

A German client specialising in integration and technology solutions

Based in Munich, the client supports its customers in implementing innovative solutions and high-value-added services worldwide. The company operates in three complementary areas: professional services and systems integration, management consultancy, and global solution services.

This contract is part of a trend in which European IT integrators are seeking to rapidly secure high-performance, reliable and available AI computing capacity, against a backdrop of significant global pressure on the supply of latest-generation components.

This transaction enhances 2CRSi's commercial visibility towards the end of its 2025/2026 financial year and confirms the Group's sustained momentum in the global market for servers dedicated to Artificial Intelligence.

About 2CRSi

Founded in 2005 in Strasbourg (France), 2CRSi designs, develops, and manufactures high-performance computer servers and innovative solutions for Artificial Intelligence, high-performance computing, and data storage. Committed to a responsible and sustainable approach, the group operates across multiple continents and delivers energy-efficient technological solutions to sectors including tech, industry, gaming, scientific research, and datacenters. 2CRSi has been listed since June 2018 on the Euronext Paris regulated market (ISIN code: FR0013341781) and transferred to Euronext Growth in November 2022.
