FURTHER PROGRESS IN AEROSPACE POWER GENERATION WITH SAFRAN ELECTRICAL & POWER

FIGEAC AÉRO (FR0011665280 – FGA:FP), a leading partner for major aerospace manufacturers, today announces that it has initiated an agreement worth over €4 million with a new customer, Safran Electrical & Power, to produce parts for aerospace power systems.

The contract under discussion will cover the production for Safran Electrical & Power (SEP), a division of the Safran group and world leader in aerospace electrical systems, of two work packages of titanium and stainless steel parts, incorporating motorization and power generation equipment, including torsion shafts.

Thanks to a competitive offering and close customer relations, SEP is set to become FIGEAC AÉRO's latest new client which will further reinforce its partnership with the Safran group. The electrical equipment involved are used in many of the commercial aerospace programmes currently led by Airbus, Boeing, COMAC and other aircraft manufacturers.

Production will take place in Escalquens (France) at the TOFER site, a subsidiary of FIGEAC AÉRO. In perfect alignment with the PILOT 28 strategic priorities, the Group already had existing industrial assets and expertise at the site, enabling it to optimize the investments to be made while optimizing usage rate at the site in question. FIGEAC AÉRO anticipates total revenue of up to €4 million over a total period of five years for the two work packages concerned, with the first deliveries of parts scheduled for the end of the current financial year.

On the back of this latest development, FIGEAC AÉRO has now secured more than 48% of its annual new business revenue target out to March 2028. In light of its current sales momentum, the Group is more confident than ever that it will meet its target.
