PRESS RELEASE

Paris, France – November 16, 2026 at 08:00 CET

Bitcoin Mining Activity for the Month of October 2026

- **Annualized yield of the mining fleet above 9% in October 2026 with Bitcoin in the order of US$78,000, penalized by the temporary shutdown of 180 servers being relocated announced in September 2026**
- **Annualized return on operational servers of more than 12%, excluding the 180 servers currently being relocated**
- **25% of mining profits are allocated to the share buyback program, up to a limit of €1 million**

Paris, France, November 16 2026, at 8:00 a.m. CET (CBI, Euronext Growth Paris: FR0014007LW0 – ALCBI; OTCQB: CBIPF) – CRYPTO BLOCKCHAIN INDUSTRIES ("CBI") announces that, for the month of October 2026, the annualized mining yield is above 9% with a Bitcoin in the range of US$78,000. The yield was negatively impacted by the ongoing relocation of 180 servers to a new center. Excluding the computers impacted by this move, the annualized return is more than 12%. This move is expected to be completed by the end of the year. 25% of mining profits are allocated to the CBI share buyback program up to a limit of €1 million.

Mining activity

Measured in US dollars, the annualized return for October 2026 is more than 9%, given a Bitcoin price of around US$78,000 at the close of October 31, 2026. This yield is insufficient and the objective remains to return, thanks to the rise in Bitcoin, to 20% per year.

Measured in Bitcoins, the return for the month is lower than the return of September 2026 again due to limitations in access to the electricity grid given one-off restrictions.

In September 2026, a technical problem led to the shutdown of 150 S21+ servers located on the Missouri site. CBI said at the time that it was considering relocating them. The transfer of these 150 servers, as well as 30 S21 XP servers, to a new mining center is now underway. These 180 servers temporarily do not generate Bitcoins, but do not incur electricity expenses during their shutdown period. They are scheduled to be back online by the end of 2026.

If we exclude these servers in the process of relocation from the basis for calculating the investments made, the annualized return of the other servers is more than 12% as of October 2026.

This return is calculated only on a cash basis, by relating the gross margin generated by the activity (value of Bitcoins received during the month less the monthly electricity bill) to the amount invested in the servers, all brought back on an annual basis. Accounting depreciations, as well as the resale price of the servers, are not taken into account in these estimates.

This profitability is likely to increase or decrease depending on various criteria, including the purchase price of the servers, the price of Bitcoin which directly influences the value of the commissions received, the cost of electricity, as well as the difficulty rate of the Bitcoin network which measures the complexity of mining a block. These annualized return figures are estimated for a given month, based on a preliminary electricity bill established by Blockware Solutions. In the event that this invoice is subsequently adjusted by Blockware Solutions to take into account the actual consumption, the estimated return is then adjusted retroactively.

Composition of the portfolio of crypto-assets and similar assets, including mining servers

CBI's portfolio of crypto-assets and related assets (see Table) is set forth below.

Note the significant rebound since the beginning of the year in BNB Standard Corporation shares, whose Net Asset Value per share (value of BNB tokens held minus debt, divided by the number of BNC shares outstanding) is around $6.

The portfolio remains large and consists mainly of Bitcoins received in mining operations, the value of which rose during the month, in addition to assets directly related to the production infrastructure, in particular mining servers. It also includes fiat currency reserves that the group plans to deploy in accordance with its capital allocation policy. Tokens created by CBI itself are not subject to an accounting valuation.

It should be remembered that some listed crypto-assets are held for periods of more than twelve months, as part of a long-term investment strategy.

CBI's portfolio of crypto-assets and related assets

October 31, 2026	Quantities	Unit Price	Total Valuation
Main crypto-assets and assimilated			
Bitcoin (*)	49.01	$73,733	$3,613,871
Bitmain Asics & S21 servers (**)	724	n/a	$3,855,617
BNB (Shares BNB Standard Corporation - Ticker BNC)	49,505	$4.95	$245,050
ETH	3.57	$2,252.75	$8,042
Solana	871	$95.35	$83,057
USDC	18,744	$1.00	$18,744
USDT	2,440	$1.00	$2,440
Other crypto-assets			
COPI / RiSE	13,649,967	$0.001	$17,745
POL	2,046	$0.092	$188
CHAIN	32,620,238	$0.006	$200,190
ATRI	30,326,589	$0.000	$0
Tokens / Internal CBI Projects			
CRYS	496,755,990	Token CBI	Token CBI
FAV	10,348,864,783	Token CBI	Token CBI
LIGHTS (***)	10,669,518,000	Token CBI	Token CBI
KTG (***)	26,500,000	Token CBI	Token CBI
CTS (****)	420,000,000	Token CBI	Token CBI
Total valuation (US$)			**$8,044,945**

(*) The price of Bitcoin and all other crypto assets is taken at the close of trading at the end of the month. Also includes bitcoins pledged as security for a $1 million loan.

(**) Amounts invested in S21+, S21 XP, S21 Pro and S21 Hydro servers, net of disposals

(***) Projects in partnership with third parties - Only the CBI share is reflected in this table.

(****) i.e.: 100 million already allocated in full ownership to CBI; 320 million representing CBI's share in the balance of tokens not yet allocated

Disclaimers

The implementation of CBI's projects, as well as their operating budget and financing plan, remain fundamentally subject to significant uncertainties. Failure to comply with the underlying assumptions could have a material and negative impact on the value of CBI's assets and liabilities. In addition, investing in crypto-assets involves risks related in particular to their intrinsic volatility, which may affect CBI's financial performance. CBI reminds investors that the past performance of crypto-assets is not a guarantee of their future performance. A detailed description of the risks associated with an investment in CBI's securities is available in the Company's financial reports on its website www.cbicorp.io.

CBI shares have a very high volatility. It is not suitable for investors who are not able to bear the loss of their entire investment or large fluctuations in the value of their portfolio.

About CRYPTO BLOCKCHAIN INDUSTRIES SA

CRYPTO BLOCKCHAIN INDUSTRIES ("CBI") is a French company listed on Euronext Growth (compartment E2) and OTC, whose objective is to build the largest possible portfolio of Bitcoins and other crypto-assets by acquiring them at below-market prices via the ACE strategy: buy mainly Bitcoins on the market (ACQUIRE), develop utility tokens and proprietary digital assets that can be sold in exchange for Bitcoins (CREATE – development currently paused), and acquire Bitcoins at a reduced cost through mining operations (EARN) as part of a long-term strategic partnership with Blockware Solutions, a provider specializing in the infrastructure and hosting of Bitcoin mining operations in the United States.
