SpineGuard: The PediGuard® device was featured in an article marking the 100th anniversary of SOFCOT

PediGuard® recognized as one of the major innovations in Spinal Surgery in France

PARIS, Novembre 16th, 2026 – 08:00 am CET – SpineGuard (FR0011464452 - ALSGD), an innovative company that deploys its DSG® (Dynamic Surgical Guidance) local conductivity sensing technology to secure and streamline the placement of bone implants, today announces the publication of an article on French innovations as part of the 100th anniversary of SOFCOT (French Society of Orthopedic and Traumatological Surgery), which recently held its annual conference in Cannes (France). This review aims to highlight the French innovations that have profoundly shaped the evolution of spinal surgery in France and identifies PediGuard® as one of them.

Patricia Lempereur, Vice President of Sales and Marketing, said: *"We are particularly proud that the PediGuard® is mentioned in this article as 'a French innovation supporting spinal surgical safety.' Its reliability and utility are highlighted, as well as its clinical recognition through numerous scientific articles."*

Since its introduction to the market, more than 120,000 spinal surgeries have been performed safely using DSG® technology, and nearly 50 scientific publications have highlighted its benefits across various indications and recognized it as a benchmark for ensuring accurate pedicle drilling. They were conducted by surgeons and research teams from many countries and are the result of laboratory studies, preclinical studies, clinical studies (including randomized controlled trials), systematic reviews, and meta-analyses. Taken together, these publications have demonstrated the reliability of DSG® technology, its precision, and its ability to reduce radiation exposure or shorten operating time during the placement of pedicle screws in all types of adult and pediatric spinal surgery, whether performed via open or minimally invasive approaches. Some of these publications focus on new applications of DSG® technology, particularly in robotics.

This growing body of published research forms the foundation of the credibility of DSG® technology, which SpineGuard is building in collaboration with renowned surgeons and its partners.

About SpineGuard®

Founded in 2009 in France and the USA by Pierre Jérôme and Stéphane Bette, SpineGuard is an innovative company deploying its proprietary radiation-free real time sensing technology DSG® (Dynamic Surgical Guidance) to secure and streamline the placement of implants in the skeleton. SpineGuard designs, develops and markets medical devices embedding its technology. Over 120,000 surgical procedures have been secured worldwide thanks to DSG® and 49 studies published in peer-reviewed scientific journals have demonstrated the multiple benefits DSG® offers to patients, surgeons, surgical staff and hospitals. Building on these strong fundamentals and several strategic partnerships, SpineGuard is expanding the scope of its DSG® technology to the treatment of scoliosis via anterior approach, sacroiliac joint fusion, dental implantology and innovations such as the « smart » pedicle screw and power drill or surgical robotics. DSG® was co-invented by Maurice Bourlion, Ph.D., Ciaran Bolger, M.D., Ph.D., and Alain Vanquaethem, Biomedical Engineer. SpineGuard has engaged in multiple ESG initiatives.
