## **In Brazil, ENGIE Fully Commissions Serra do Assuruá, Its Largest Wind Complex Worldwide**

- **With 846 MW of installed capacity, Serra do Assuruá is ENGIE's largest onshore wind project globally and one of the largest in Latin America.**
- **The project combines large-scale renewable energy generation with ENGIE's commitment to sustainable growth—creating thousands of jobs and supporting local communities through targeted social and environmental programs.**

ENGIE has officially reached full commercial operations at the Serra do Assuruá Wind Complex, located in Gentio do Ouro, Bahia, northeastern Brazil. The complex comprises 188 wind turbines across 24 wind farms, delivering a total installed capacity of 846 MW — the largest onshore wind development in ENGIE's global portfolio and a flagship project for Latin America. The infrastructure also includes 28 kilometers of transmission lines, connecting the site to Brazil's main electricity grid, ensuring reliable energy delivery nationwide.

The complex has gradually begun operating since August 2024, following authorization from ANEEL<sup>1</sup> — Brazil's national electricity regulatory agency — and supplies renewable power to the Free Energy Market, contractual framework that enables corporate consumers to acquire energy directly from producers and select their preferred source of generation, allowing them to secure renewable supply.

### **Driving Sustainable Development Rooted in Local Communities**

During the construction phase, the Serra do Assuruá project generated approximately 3,000 direct and indirect jobs. ENGIE prioritized local hiring, through targeted recruitment and skills-matching initiatives. The company also supported the Bahia Qualification Program, offering 60 free training places — half reserved for women — in bricklaying, reinforced concrete structure erection, and carpentry. This 120-hour certified program targets low-income and socially vulnerable candidates, fostering employability and professional skills.

Guided by its corporate social responsibility strategy, ENGIE has also implemented several community projects in Gentio do Ouro and surrounding areas, focusing on social inclusion, environmental education, economic development, and infrastructure improvements. In collaboration with local communities, authorities and associations, the company has delivered tangible benefits such as community centers, public squares, and multi-sport facilities, improving quality of life for rural and quilombola populations.

"Serra do Assuruá demonstrates ENGIE's commitment and ability to deliver complex industrial projects tailored to local needs. It reflects our dedication to an inclusive and market-driven energy

transition that benefits communities while providing clean, reliable power,” said Paulo Almirante, ENGIE Senior Executive Vice President, Renewable and Flexible Power.

### **Strengthening ENGIE’s Strategic Role in Brazil’s Energy Transition**

ENGIE plays a key role in Brazil’s energy transition. The Group has been active in the country for nearly 30 years, operating across renewable generation, energy sales, transmission, gas transportation, and energy solutions.

In Brazil, ENGIE currently operates a total installed capacity of 15.7 GW, 100% renewable, including hydroelectric, onshore wind, and solar assets. The Group also manages 3,200 km of transmission lines and 22 substations in the country. ENGIE recently commissioned the first 334-kilometer section of the Asa Branca transmission network in Bahia, a strategic infrastructure that will extend over 1,000 kilometers in the states of Bahia, Minas Gerais, and Espírito Santo. In addition, ENGIE is implementing the Graúna Project, which involves the construction of 780 km of transmissions lines between Paraná and Santa Catarina, and approximately 660 kilometers from the Asa Branca project.

### **About ENGIE**

ENGIE is a major player in the energy transition, whose purpose is to accelerate the transition towards a carbon-neutral economy. With 98,000 employees in 30 countries, the Group covers the entire energy value chain, from production to infrastructures and sales. ENGIE combines complementary activities: renewable electricity and green gas production, flexibility assets (notably batteries), gas and electricity transmission and distribution networks, local energy infrastructures (heating and cooling networks) and the supply of energy to individuals, local authorities and businesses. Every year, ENGIE invests more than €10 billion to drive forward the energy transition and achieve its net-zero carbon goal by 2045.

Turnover in 2024: €73.8 billion. The Group is listed on the Paris and Brussels stock exchanges (ENGI) and is represented in the main financial indices (CAC 40, Euronext 100, FTSE Euro 100, MSCI Europe) and non-financial indices (DJSI World, Euronext Vigeo Eiris - Europe 120 / France 20, MSCI EMU ESG screened, MSCI EUROPE ESG Universal Select, Stoxx Europe 600 ESG-X).
